

Red Hat Lightwell → JFrog Artifactory → VS Code

Curated upstream security patches mirrored via enterprise proxy directly into the developer's workspace.

Red Hat Lightwell

CURATED UPSTREAM SOURCE

- **Targeted Backports:** In-place surgical CVE fixes without forced major version upgrades.
- **Binary Compatibility:** 100% drop-in stability guarantee with zero API breaking changes.
- **Signed Provenance:** Enterprise cryptographic signatures, SBOMs, and attestation data.

JFrog Artifactory

ENTERPRISE REMOTE MIRROR

- **Remote Repository:** Secure proxy mirroring Lightwell Maven, npm, and PyPI endpoints.
- **Virtual Aggregation:** Merges internal and mirrored feeds under one internal URL.
- **Air-Gap & Governance:** Local caching resilience, audit logging, and Xray policy checks.

VS Code Workspace

IN-EDITOR PACKAGE DETECTION

- **Manifest Inspection:** Detects dependency changes in `pom.xml` or `package.json`.
- **Immediate Feedback:** Displays non-breaking patch notification from internal Artifactory.

```

pom.xml (dependencies)                                JFrog Extension
-----
- 2.14.1
+ 2.14.1.redhat-00002

Quick Fix: Upgrade to mirrored Lightwell fix
(Safe patch)
  
```

 **Zero-Breaking Remediations**
Retain current dependency baseline without refactoring

 **Transparent Mirroring**
Single proxy endpoint eliminates developer friction

 **Shift-Left Resolution**
Instant visual notification right in VS Code
